SUMMARY

Analyst with experience building ML-driven account scoring and BI dashboards for public health operations. Proficient in Python, SQL, and Power BI. Comfortable owning a full pipeline from raw data to executive reporting

EDUCATION

Knox College — BA in Integrative Business Management & Data Science Expected June 2026

Coursework: Neural AI, Data Mining, Database Systems, Mathematical Statistics, Managerial Finance · **Knox**

Trustees Distinguished Scholarship

WORK EXPERIENCE

RainFocus

Lehi, UT | May – Oct 2025

Business Systems Administrator (Part-Time)

- Resolved **20+** cross-functional **Salesforce** configuration requests across Finance and Sales by gathering requirements directly from stakeholders and validating each change through **UAT** before deployment.
- Scoped and documented a data hygiene backlog across **Salesforce** and **Marketo**, flagging duplicate records and field inconsistencies to support a cleaner pipeline for the sales team.

Business Systems Intern

- Consolidated **Salesforce**, **Marketo**, and **ZoomInfo** into a unified **35,000+** row GTM dataset for account-level analytics across sales and marketing.
- Built an **XGBoost** account-scoring model — engineering temporal recency and sales-stage features from raw CRM activity — to surface pre-conversion pipeline signals and prioritize sales outreach.
- Published prioritized account views in **Looker**, reducing manual review time and shaping weekly sales focus for the revenue team.

PepsiCo — *Sales & Insights Intern*

Pakistan | Jul – Sept 2024

- Analyzed **50+** bakery markets to identify expansion opportunities tied to a **10%+** regional revenue growth target, informing distribution prioritization decisions.
- Built a **Tableau** dashboard using **SQL**-aggregated route-level KPIs and sales trends for regional leadership.

Sindh Integrated Emergency & Health Services — *Data Science Intern*

Pakistan | Jun – Jul 2024

- Integrated HR timestamp records for **1,800+** employees in **R**, correcting attendance data and enabling anomaly detection across shift patterns.
- Developed **ARIMA/Prophet** forecasts and a **Power BI** dashboard for the Chief Information Digital Officer to monitor staffing gaps and operational efficiency.

PROJECTS

SaaS Analytics Warehouse — *SQL Data Model & BI Dashboard*

- Designed a **SQLite** analytics warehouse with **6** analytical **SQL** views tracking revenue trends, usage behavior, and customer health scores across **238** accounts.
- Built an interactive **Chart.js** dashboard surfacing accounts by health tier, flagging **22** accounts with overdue or written-off invoices and identifying **3** high-usage, below-revenue upsell targets.

LedgerSmart — *Cash-Flow Intelligence System*

- Eliminated manual reconciliation for a small trading business by building a Python ETL pipeline ingesting **318** transactions into a unified **SQLite** schema.
- Surfaced 3-month liquidity forecasts for a small trading business by training a scikit-learn transaction classifier across **10** accounts and layering cash-flow projections with confidence intervals.

Netflix Recommender System — *Collaborative & Content-Based Filtering*

- Built a hybrid recommender in **Python** combining collaborative filtering (**cosine similarity** on user-item matrices) and content-based filtering on genre/metadata to generate personalized title suggestions.
- Evaluated model performance using **precision@k** and **RMSE**, comparing baseline popularity ranking against personalized recommendations across **100,000+** ratings.

SKILLS

Analytics & BI: SQL, Python (pandas, scikit-learn, XGBoost), R, Excel, Power BI, Tableau, Looker Studio

Platforms: Salesforce, Marketo, ZoomInfo, JIRA, GitHub, Jupyter/Colab, Microsoft Office Suite
