SUMMARY

Data scientist building end-to-end systems from predictive models and ETL pipelines to executive-facing BI dashboards. Experience across SaaS, CPG, and public health

SKILLS

Languages: Python (pandas, scikit-learn, XGBoost), R, SQL, SARIMAX, time-series forecasting, anomaly detection

BI: Tableau, Power BI, Looker Studio, Excel

Tools & Platforms: Salesforce, Marketo, ZoomInfo, JIRA, GitHub, Jupyter/Colab, FastAPI

WORK EXPERIENCE

RainFocus

Lehi, UT | May – Oct 2025

Business Systems Administrator (Part-Time)

- Automated recurring financial reporting by building a Python script with **GitHub Copilot** that pulled data from **Salesforce** via API into **Excel**, replacing a manual pull-and-build process
- Resolved **20+** Salesforce configuration tickets across departments and used validation-rule logic while gathering requirements from stakeholders and validating each change through **UAT**

Business Systems Intern

- Built an **XGBoost** account-scoring model (**~68% F1**) by engineering temporal-recency and sales-stage features from raw CRM activity, working through the feature logic with **Gemini** to surface pre-conversion pipeline signals from the existing vendor lead-scoring system
- Drove faster pipeline prioritization after the **Sales EVP** adopted the model's account rankings into weekly review, choosing an internal, editable model over the vendor's black-box system
- Engineered the unified 35,000+ row GTM dataset behind the model by consolidating and deduplicating Salesforce, Marketo, and ZoomInfo records, using **Cursor** to refine the pipeline

PepsiCo — Sales & Insights Intern

Pakistan | Jul – Sept 2024

- Surfaced expansion opportunities across **50+** bakery markets against a **10%+** revenue target using **SQL** aggregation with **ChatGPT** and engineered KPIs.
- Drove leadership to pursue a new target market by building a **PowerBI** dashboard over the SQL-aggregated KPIs, surfacing **15+** interested customers that shaped distribution prioritization.

Sindh Integrated Emergency & Health Services — Data Science Intern

Pakistan | Jun – Jul 2024

- Built ARIMA and Prophet time-series forecasting models to predict staffing gaps for **1,800+** employees, delivering the forecasts to the Chief Information Digital Officer through a **Power BI** dashboard tracking operational efficiency.
- Enabled anomaly detection across shift patterns by reconciling HR timestamp records for **1,800+** employees in **R**, engineering clean attendance features from raw data

PROJECTS

LedgerSmart — Cash-Flow Intelligence System

- Digitized **\$490K** in annual transactions across **59** accounts for a trading firm by building and deploying a production financial platform (FastAPI + React) that replaced its entire manual bookkeeping process
- Architected the full data pipeline with **Claude Code**, building a custom ETL layer that ingests raw Excel ledgers into **SQLite** and serving it through a FastAPI backend deployed on Render
- Saved the business **\$25,700** by engineering a 4-model ML pipeline whose SARIMAX forecaster flagged a low-revenue month early, prompting a **15%** inventory cut ahead of the downturn.

Netflix Multi-Method Recommender — Ensemble ML System

- Built a content-based recommendation engine across **8,800+** titles by engineering a 5-method ensemble into a single weighted scoring pipeline.
- Achieved **84%** classification accuracy and a **0.659** silhouette score, integrating a live OMDb/Google Sheets API so users get real-time recommendations from new input.

EDUCATION

Knox College — BS in Integrative Business Management & Data Science

Coursework: Neural AI, Data Mining, Database Systems, Mathematical Statistics, Research in Statistics, Advanced Managerial Accounting, Harvard CS50x

Knox Trustees Distinguished Scholarship
